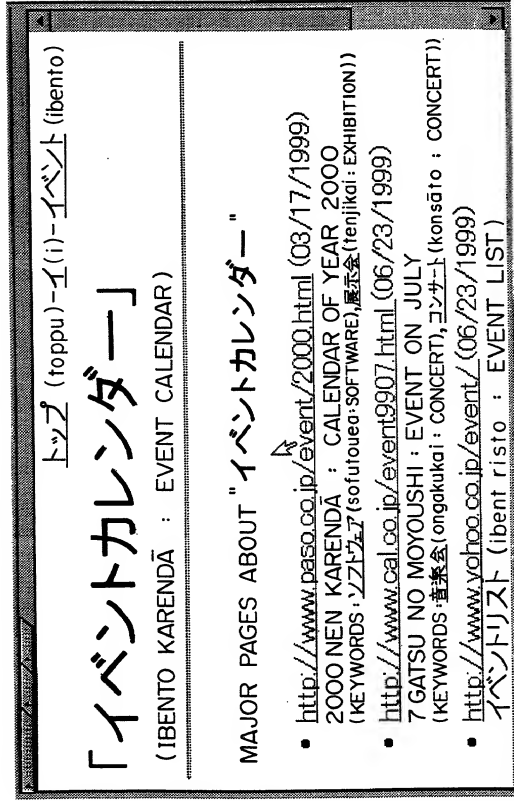

FIG. 26

FIG. 27

The diagram illustrates a system for processing an intranet. It begins with an **INTRANET** (oval) connected to a **COLLECTING ROBOT** (rectangle). The robot collects **INTRANET WEB DOCUMENT** (represented by overlapping rectangles). These documents are processed by a **LINK IMPORTANCE ASSIGNING DEVICE** and a **URL SIMILARITY CALCULATING DEVICE** (both in rectangles). The results are stored in a **LINK IMPORTANCE** database (cylinder). A **KEYWORD EXTRACTING DEVICE** (rectangle) processes the documents to generate **PAGE KEYWORD** (cylinder). A **KEYWORD-DOCUMENT CORRELATION CALCULATING DEVICE** (rectangle) receives input from the link importance database, the page keyword database, and a **DOCUMENT TYPE** database (cylinder, labeled 92). This device also receives **ACCESS LOG** (cylinder) from an **ACCESS ANALYZING DEVICE** (rectangle). The correlation device outputs to an **INDEX CREATING DEVICE** (rectangle), which generates **INDEX DATA** (cylinder). The index data is then stored on a **WEB SERVER** (rectangle). A **WEB BROWSER** (rectangle with a screen) interacts with the web server via **DISPLAY OUTPUT** and **COMMAND INPUT**. The entire system is enclosed in a dashed line, with a **PROCESSING DEVICE 11** label at the bottom right.
